Route Table with route assign

The screenshot shows the AWS VPC console interface. On the left is a navigation sidebar with options like 'Filter by VPC', 'AWS Global View', and 'Virtual private cloud'. The main content area is titled 'rtb-08acc2146c6391b8b / Demo-RT'. It includes a 'Details' section with fields for 'Route table ID' (rtb-08acc2146c6391b8b), 'VPC' (vpc-0fc13c14095d42bae), 'Main' (No), and 'Owner ID' (5156212). Below this is a 'Routes' tab showing a table of routes. The table has columns for Destination, Target, and Status. Two routes are listed: one for 0.0.0.0/0 pointing to an Internet Gateway (igw-0b135c213817ec1...) and another for 10.0.0.0/16 pointing to 'local'. Both are 'Active'.

Destination	Target	Status
0.0.0.0/0	igw-0b135c213817ec1...	Active
10.0.0.0/16	local	Active

Now creating a new VPC i.e. Temp

The screenshot shows the 'Your VPCs (1/3)' page in the AWS VPC console. It features a search bar and a table with columns for Name, VPC ID, and checkboxes. Three VPCs are listed: 'Demo-vpc-om' (vpc-0fc13c14095d42bae), an unnamed VPC (vpc-00c4fb527bhc90...), and 'Temp-vpc-om' (vpc-0f24c0080bead4602), which is selected with a blue checkmark. Below the table, the details for 'vpc-0f24c0080bead4602 / Temp-vpc-om' are partially visible, showing tabs for 'Details', 'Resource map', 'CIDRs', 'Flow logs', and 'Tags'.

Name	VPC ID

now peering at both vpc's

Create peering connection

A VPC peering connection allows a virtual link connection between two VPCs that enables you to route traffic between them privately.

Peering connection settings

Account **us-east-1**
Create a new VPC in this account or select an existing VPC.

Select a VPC to peer with

VPC ID (Required)
vpc-0f13c14095d42bac (Demo-vpc-om)

VPC CIDRs for vpc-0f13c14095d42bac (Demo-vpc-om)

CIDR	Status	Status reason
10.0.0.0/16	Associated	

Select another VPC to peer with
